Enhancing the NPO Recommendation System with Metadata  
Eileen Kapel

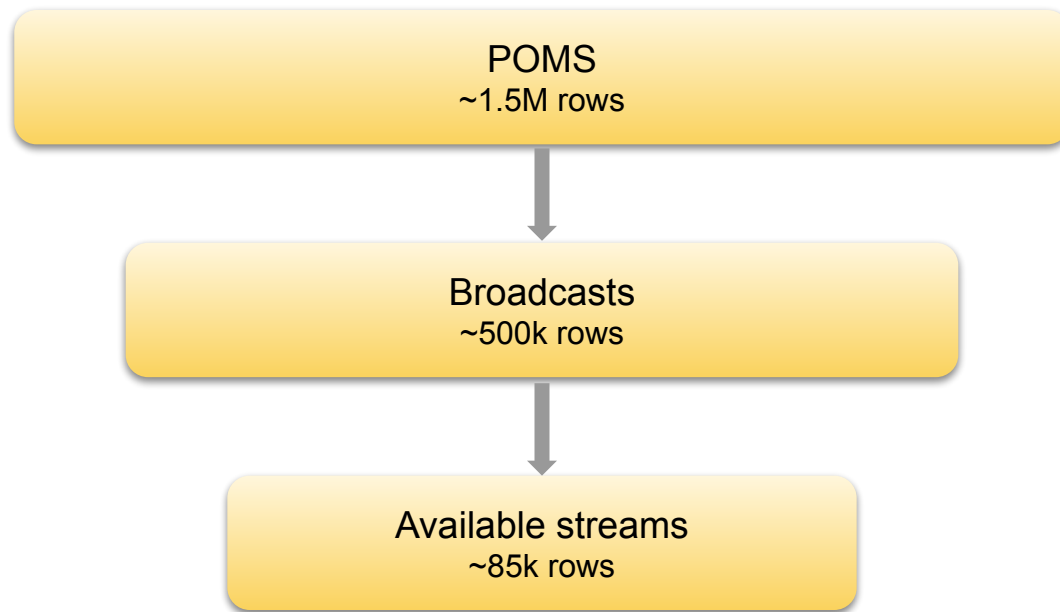

# 1. Research questions

*‘Can **content-based filtering** using **metadata** enhance the current **recommendation system** of NPO Start which uses **collaborative filtering**?’*

# 1. Research questions

- Sub-questions
  - What is the current collaborative filtering performance?
  - How much can the recommendation system be improved by using different content-based filtering methods integrated with the current system?
  - Which metadata features improve the recommendation the most?

### 3. Achievements

Week	Achievements
1	Introduction section done. Pre-processed data.
2	EDA and data described. Investigated current performance. Investigated topic modeling on subtitles.
3	Literature read. Literature described and important parts highlighted.

## 4. Deliverables

Week	Achievements
4	Baseline algorithm was set up and evaluated. Data and literature section done.
5	Investigated integrating content-based filtering and collaborative filtering. Method section done.
6	<i>Mid-presentation.</i> Hybrid recommender system was set up.
7	A/B testing was set up.
8	Checked results of A/B testing. Experimented and tuned hyperparameters.
9	Checked results of A/B testing. Experimented and tuned hyperparameters.
10	Results section done.
11	Conclusion & discussion section done.
12	Thesis done.
